

# BlackBerry Desktop

ENABLE SECURE REMOTE CONNECTIVITY FROM ANY  
WINDOWS 10 OR MACOS DEVICE

## **Maximized Productivity. Reduced Costs. Unparalleled Security.**

With BlackBerry® Desktop, you can give your users **secure access to email, corporate websites, servers, content, and files** on their personal or non-corporate managed Windows® 10 and macOS® devices. You can simplify bring-your-own computer (BYOC) programs in your organization, and extend productivity to both traditional and non-traditional employees – including contractors, remote workers, and external partners.

We can also help you **save on hardware, software, provisioning, and help desk costs** for your enterprise. You can integrate BlackBerry Desktop easily with your existing Microsoft® Office on-prem or Microsoft 365® investments. Our solutions enable complete business productivity across endpoints to all your users, **without the need for VPN or VDI, complex hardware, certificates and authentication, or complicated sign-in procedures.**

## **Reach More Endpoints with Simple Onboarding and Offboarding**

BlackBerry Desktop enables the modern enterprise to reach more endpoints by providing a turnkey way to quickly onboard or offboard contractors, partners, non-employees, and home workers.

Provisioning any user is simple. IT can onboard any user by providing a simple access key. After activation, the user can then access all corporate resources with a single sign-on to BlackBerry Apps on their computer, separate from their personal apps. IT can also easily wipe all corporate data from the device, such as at the end of a contract or in the event of an emergency – without having to worry about a complex enrollment and deprovisioning process.

## Full Business Productivity from Non-Corporate Managed Computers and Tablets

Users can securely work with their corporate tools and cloud apps anytime, from any device of their choice. Best of all, they have the same set of capabilities that they would have with a traditional corporate-owned and managed computer.

**Email:** Effortlessly create business emails with the ability to accept/decline meeting invites from the inbox, **compose rich emails, perform spell checks.**

**Calendar:** Easily manage business calendar and utilize the free/busy lookup capability to align with everyone's schedules.

**Documents:** While online, download or open files, edit them straight from the secure browser – **offline with built in secure document editor and online with office web apps,** and email them to colleagues.

**Contacts:** Reach any of your corporate Active Directory contacts with ease. Contacts History and GAL information all with a single click.

**Office 365 Apps:** Work with your Microsoft Office 365 apps online so you can always collaborate with the right business tools.

**Intranet Websites:** Access intranet sites and manage bookmarks, history, and downloads so that content is always within reach.

**Cloud-Based Business Apps:** Easily access file-based apps, dashboards, reporting tools, and more such as Salesforce.com, Workday®, Expensify, SuccessFactors, Bloomberg, and others.

**File Sharing:** Share and sync files both inside and outside your organization. With the following BlackBerry products, users can utilize these rich capabilities.

BlackBerry Work

BlackBerry Access

BlackBerry Workspaces

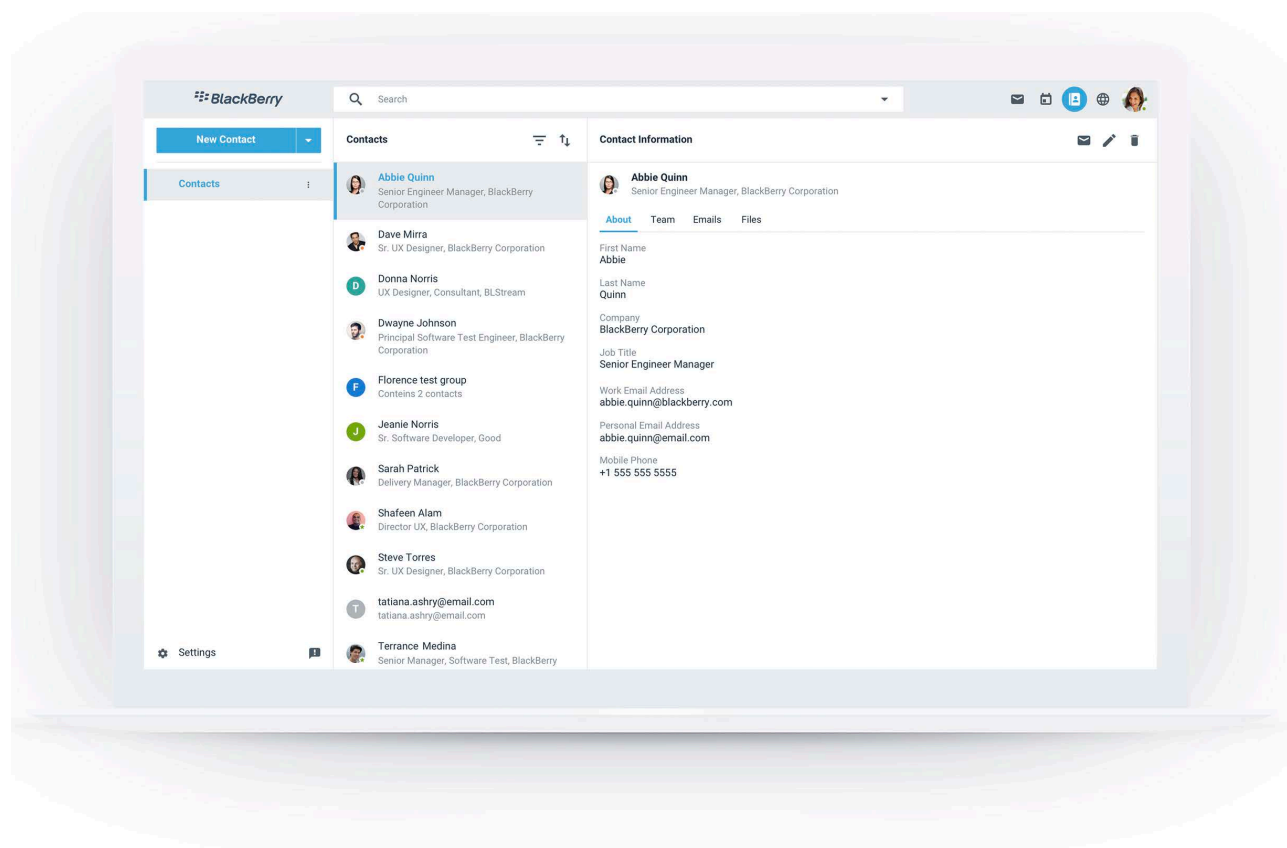

These solutions integrate with Microsoft Office 365 to provide enhanced collaboration and security.

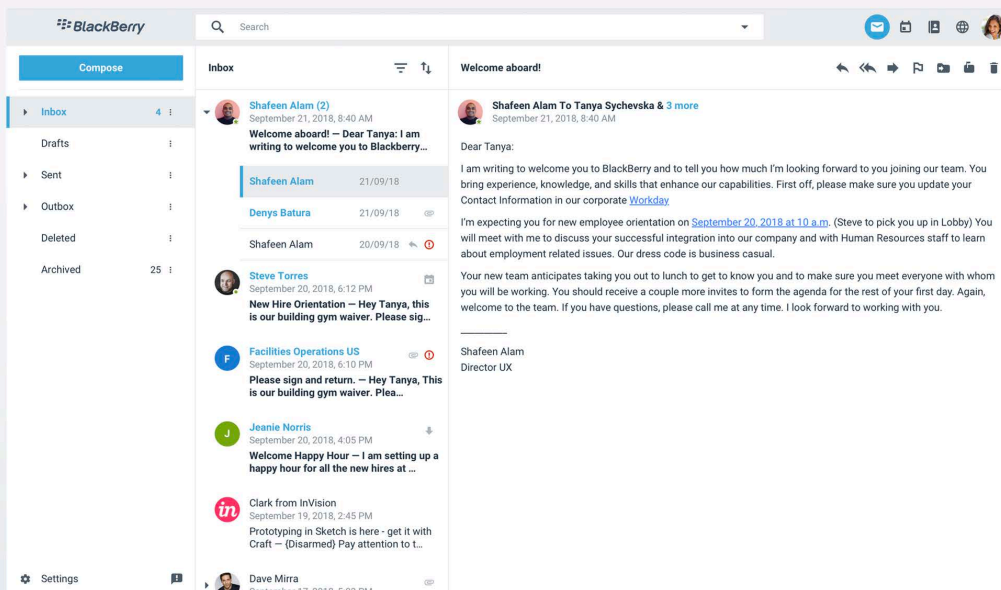

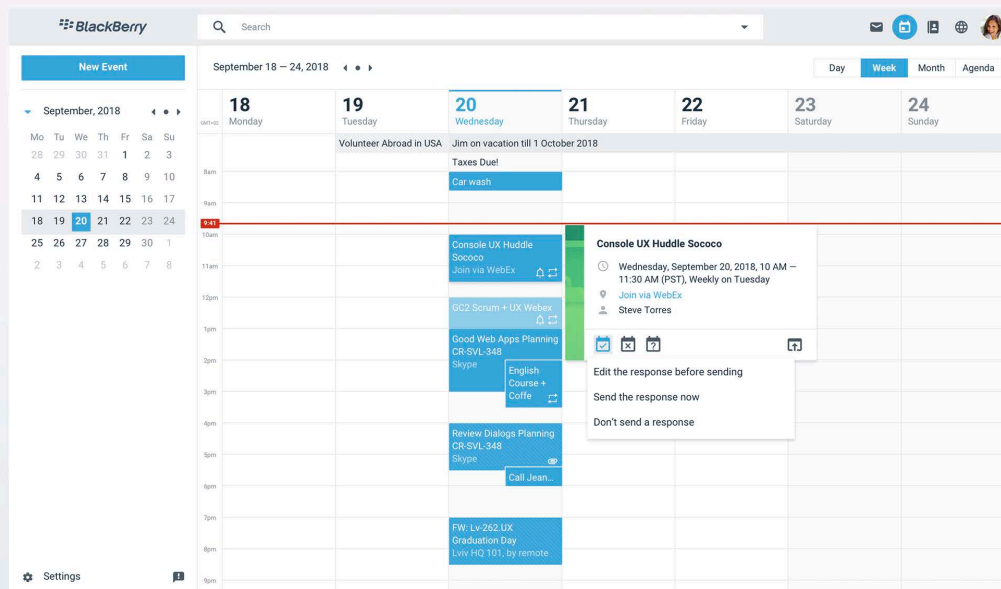

# BlackBerry Work

Users can collaborate freely with business-focused capabilities:

- Read, send, and manage emails
- Schedule and open meetings from their business calendar
- View contact lists
- And more!

# Access Your Microsoft Office 365 Applications Online

Users can easily access their Microsoft Office 365 apps online by seamlessly connecting to on-prem or cloud resources.

With just a couple of clicks, users can collaborate with:

- Microsoft Outlook: Email, calendar, contacts, tasks, and notes
- Content repositories: Microsoft SharePoint, OneDrive, and more
- Full Online Document Editing: Create and edit Microsoft Word, Microsoft Excel, and Microsoft PowerPoint files, and share them with colleagues

## **Securely Collaborate on Corporate Websites**

BlackBerry® Access enables users to securely enter and collaborate on corporate web apps. This gives users easy-to-access business resources such as internal portals, HR resources, and dashboards. By providing one-click access to these apps, users will have all resources at hand without limitations on discoverability or security.

Enterprises can configure Chromium extensions so that users can stay even more productive with the most commonly-used corporate applications, such as web conferencing, sales reporting (e.g. Salesforce), project management, and more.

### Three Easy Steps to Deploy

- IT deploys the application to users. Existing BlackBerry® Dynamics infrastructure supporting iOS and Android can be seamlessly leveraged for supporting Windows 10 and macOS
- Users download the app on their Windows 10 or macOS device from [www.blackberry.com/desktop](http://www.blackberry.com/desktop), and enter the access key to activate the app.
- With a single sign-on, users will now be able to access corporate intranet and business apps anytime, anywhere.

And when an employee leaves the company, IT can remotely wipe the BlackBerry Access app data from the user's laptop. The corporate data is now removed from the desktop while the user's personal data remains untouched.
